

RRP Groups — What's New

Website and mobile app update · for the office team, owner and drivers

26 September 2026

This note explains, in simple words, what has changed since the last update. For every change you will see how it worked before and how it works now.

Before you start

- **Everyone with the app:** install the new APK shared in the group today. Your login and data stay the same.
- **Website:** the website is already updated. Press Ctrl + F5 once to load the new version.

For everyone (mobile app)

New notification sound

Before	Now
The notification sound was the phone's normal tone and was easy to miss.	Every app notification (new order, assigned order, maintenance request and others) now plays a new, clear sound — once .

Good to know

- If you do not hear it, check that the phone is not on silent and that notifications are allowed for the RRP app.

No more rounding off

Before	Now
Quantities were rounded to 2 decimals (1.125 showed as 1.13). Some amounts were rounded to whole rupees.	Quantities show exactly as entered: 1.125 stays 1.125 , and totals keep every decimal. Money keeps paise everywhere (₹1,500.50 stays ₹1,500.50).

Good to know

- This applies to the app and the website: order cards, trip sheet, bills, challans and reports.

For the office team (website)

Discount shown separately in the ledger

Before	Now
A payment of ₹40,000 with ₹300 discount showed as one line: Payment In ₹40,300 . "Total Received" counted the discount as money received.	Two lines: Payment In ₹40,000 (green) and Discount ₹300 (blue). The balance ends the same. "Total Received" shows only the money received, with a separate Discount total next to it. The statement PDF shows a Discount box and a "Total Discount" row.

How to use it

1. Open a customer's **Ledger**. Use the **Type** filter → **Discount** to see all discounts given.

Weekly Statement — one simple table

Before	Now
Each invoice was a separate block of small text: driver, place, "20mm: 4 × ₹4,200 = ₹16,800" and a running balance.	A summary on top: Opening Balance, Billed, Paid, Discount (if any) and Closing Balance. One table: Date · Material · Qty · Rate · Amount — one row per material, with the driver and vehicle in small text under it. Payments in green, discounts in blue, and the Closing Balance as the last row.

How to use it

1. Go to **Reports** → **Management** (Weekly Summary) and click a customer to open the statement.

For drivers (mobile app)

Order cards — a clear table

Before	Now
The material and quantity were one line ("📦 1 Unit M Sand") and the amount was at the top corner.	Under the customer name and phone there is a table: Material · Qty · Amount . One row per material, and a Total row when the order has two or more materials. Bigger text on the whole card (name, phone, place, vehicle, buttons).

Good to know

- Grouped orders show all materials with a Total. "View N Orders" shows each order's own table and place.

Trip sheet (History) — same details as the PDF

Before	Now
The Table view showed only Place, Qty and Collected; Rate and Amount were only in the PDF.	The Table view has the same columns as the PDF: No, Time, Vehicle, Crusher, Material, Party, Place, Qty, Rate, Amount , Collected. Collected shows the payment mode (Cash / GPay). A summary shows the Total Amount and money collected in each mode.

Trip sheet Full view — no scrolling left and right

Before	Now
The table was wider than the phone, so you had to scroll left and right while copying it to the paper log.	Tap  Full view : the whole trip sheet fits on one screen, with every column visible, plus the total and diesel details.

How to use it

1. Open **History** and choose **Table**.
2. Tap  **Full view** and turn the phone sideways.
3. Tap **✕ Done** to go back.

Good to know

- It works even if auto-rotate is off — the sheet is drawn sideways for you.

For the owner and office (mobile app)

Order cards — table with rate and amount

Before	Now
Cards showed "📦 1 Unit M Sand" and "1 Unit · ₹5,300" as plain text lines.	A table under the customer: Material · Qty · Rate · Amount , with a Total row for orders with two or more materials. Bigger text on the whole card.

Customer phone on every order card

Before	Now
The customer's phone number was not shown on the Owner Dispatch Board.	Every card shows the customer's phone under the name. Tap it to call . Purchase trips show the supplier's phone.

Good to know

- If a card shows no phone, add the number to the customer in Masters → Customers.

Grouped orders — "View N Orders"

Before	Now
Inside "View 2 Orders", each order showed only the phone number and the amount.	The group card shows all materials in one table with the Total. Each order inside shows its own material table, place and driver .

Weekly Statement in the app

Before	Now
Each invoice was a card with small text that was hard to read.	The same simple table as the website: Date · Material · Qty · Rate · Amount , with the driver and vehicle under each material. Payments in green, discounts in blue, Closing Balance at the bottom. A blue Discount line in the summary when there is one.

How to use it

1. Open **More** → **Weekly Statements** and tap a customer.

Need help?

If something does not work as described, send a screenshot with the screen name, what you did and what you expected. For the app, mention whether you were logged in as driver or owner.
